PDF: 1. Recommended step by step procedure for the safe clean up of fouling, the prevention of staining and the complete eradication of foul odours from vomit, excrement, urine and other bodily discharges in homes, cars and caravans as a result of accidents, illness or injury.

Fouling from body fluid discharges are particularly distressing and usually the result of accidents, illness and incontinence.

And in the case of illness, studies show that foul odours can hinder recovery and prolong recovery times.

Your 5 PART XERIA KIT provides everything you will need to clear up fouling, prevent staining and eliminate even the most extreme odours whether airborne, surface or sub surface.

Step 1: XERIA RX23 Super Strength Foul Odour Air Space Spray

If the pervading odour is so powerful that it makes you almost physically sick and unable to venture anywhere near it, spray the air in the vicinity with XERIA RX23 to temporarily clear away this intense 'overhanging' odour in the air, enabling you to get to work at it's source.

Step 2: XERIA XSR pH Neutral Rescue Surface Spray on Wipe Off Cleaner and Stain Remover

First clear away any solid waste and wipe away any excess pooling of urine. Then spray the surface with XERIA XSR RESCUE and leave for around 30-60 seconds. Wipe away as much of the soiling to clean the surface and prevent staining.

XERIA XSR RESCUE can be used on solid laminate flooring, wooden flooring, tiles, ceramics, plaster, carpets, mattresses and other textile surfaces.

Where however there are risks of cross infection, before using XERIA XSR RESCUE, first spray the fouled area with XERIA RX75HS Hospital Grade Dual Quaternary Ammonium Sanitising and Disinfecting Spray and leave for 30-60 seconds.

Then follow with surface cleaning with XERIA XSR RESCUE.

XERIA RX75HS is available to buy separately.

Always test carpets and fabrics for colour fastness in an inconspicuous area first. Take care not to damage pile on velvet or dralon by over rubbing

Use protective rubber gloves. For added protection during the clean up of potentially infectious discharges, use the XERIA RXBPP BODY FLUID CLEAN UP PROTECTION PACK available to buy separately.

Step 3: XERIA RX66 Bio Enzymatic Foul Odour Digester. Nature's miracle!

Bodily discharges and fouling create odour. But once the fouling and odour causing bacteria have penetrated subsurface, you get an almost permanent lingering 'background odour' that no amount of dousing with disinfectant or air freshener can eliminate.

The Bio Enzymatic action of XERIA RX66 seeks out biodegradables and eliminates all organic residues and odour causing bacteria on surfaces as well as any that may have soaked through and migrated sub surface through carpets, mattresses, upholstery and flooring.

First spray the pet fouled surface with XERIA RX66 and leave for 1-3 hours to air dry.

Then dry vacuum the carpet area or wipe over other surfaces with a clean damp cloth.

If necessary repeat the process again.

Always test carpets and fabrics for colour fastness in an inconspicuous area first.

Step 4: XERIA RX60 Air and Surface Foul Odour Deodoriser Spray

Use as a final surface spray to deodorise and freshen after using XERIA RX66. Also use to spray the air to eliminate all remaining airborne odour.

Step 5: XERIA RX17 For Continuous Air Foul Odour Removal

Keep's your air space smelling fresh and clean clearing every trace of airborne odour!
